One of the greatest discoveries of the last century is that we humans are part of a vast, sacred universe that has given rise to life. Yet at the same time, humans are imperiling this life by unraveling the ecosystems that support the Earth community.

How can we bring diverse perspectives and movements into greater dialogue and cooperation? What are the shared moral principles that would bring these concerns together? What roles can various sectors play in this integration: education, religious communities, civil society (NGOS, non-profits)?
